

Next Generation Learning

# HIGH-TECH INDUSTRY INTERNSHIP PROGRAM

Are you interested in developing a career and getting jobs at leading tech companies? Our last cohort of interns were hired by Google, Amazon, Walmart, Siemens, and Cerner Corporation. We are now accepting applications for the 2019 cohort. This program is designed to help you gain valuable work experiences in the high-tech industry.

## INTERNSHIP POSITIONS

- **Software Engineer:** Learn the agile development process, master the latest front and back-end development tools, and take charge of an app from conception to production.
- **UI/UX/Product Manager:** Learn how to develop beautiful user interface and meaningful user experience and jump start your career in product management.
- **Digital Marketer:** Learn how to market software applications via online and offline marketing media with a special emphasis on social media marketing.

**Year-round Internship within walking distance to UCI**

## HOW IT WORKS

STAGE ONE: You will commit a minimum of 10 hours per week as an unpaid intern to learn and refine your knowledge of JavaScript, React, React Native, and GraphQL. You will also learn the agile development methodology and be assigned to a product team where you get full access to the mentorship of our development team.

STAGE TWO: Once you become a competent coder, you will serve as the lead developer on a startup team to build a real world product. The goal is to develop your software architecture and designing skills. The team will collaborate with business owners to create a Minimum Viable Product (MVP) and pitch to the investors internally or externally.

STAGE THREE: If your project is funded, you will be hired to lead a team of junior developers to fully develop the product and launch it to the market place. If your project is not funded, but you have proven to be an excellent developer, you will be awarded with a paid internship and assigned to an existing software development team.
